DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 12,16-19,21-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "easy, essentially, type" in claims 12,16-19,21-27 is a relative term which renders the claim indefinite. The term "easy, essentially, type" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 12-30,32,34-36,38-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Schlaeppi et al. (0596747).

Schlaeppi et al. discloses a process comprising manufacturing a multilayer packaging film for an easy open form of packaging (col. 1 lines 1-3) having at least one line of perforations (figure 1 number 8) that are provided in a plastic surface layer of the

Art Unit: 1772

packaging and serve as an aid for alignment of a tear line propagating in the packaging film upon tearing open the packaging (col. 2 lines 45-49), including cutting the perforations into a surface layer which is in the form of a film (col. 3 lines 9-11), and joining the precut film to the other layers to make up a composite film (col. 3 lines 10-13). Schlaeppi et al. discloses that the film is joined to the other layers by means of an adhesive layer to make up a composite film (col. 4 lines 19-20). Schlaeppi et al. discloses that the perforations are cut before coating the film with adhesive (col. 4 lines 15-21). Schlaeppi et al. discloses that the perforations are cut after coating the film with adhesive (col. 5 lines 15-21). Schlaeppi et al. discloses that the two lines of perforations are cut essentially parallel to each other and a distance apart as guidelines on both sides of a tear which propagates in the film on tearing open the packaging (figure 1 numbers 8a and 8b). Schlaeppi et al. discloses that the packaging film is employed for the production of pouch-type forms of packaging (figure 1). Schlaeppi et al. discloses that the film is joined to the other layers by means of extrusion to make up a composite film (col. 4 lines 20-21). Schlaeppi et al. discloses that the perforations are situated on the inner side of the packaging (col. 6 lines 24-25). Schlaeppi et al. discloses a notch for initiating tearing is provided in the region of the perforations (col. 1 line 10).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1772

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 30-34,36-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schlaeppi et al. in view of Olivieri et al. (98/29312).

Schlaeppi et al. discloses the process and package described above. Schlaeppi fail to disclose that the notch is situated between the two lines of perforations. Olivieri et al. discloses a notch inbetween the two lines of perforations (figure 8 number 431) for the purpose of tearing the materials forming the pack (page 15 lines 3-4).

Therefore, it would have been obvious to one of ordinary skill in the art to provide Schlaeppi et al. with a notch inbetween the two lines of perforations in order to tear the materials forming the pack (page 15 lines 3-4) as taught by Olivieri et al.
